

Demon 98 Triple Deuce Intake Packages

Dahlonega, GA –

Responding to requests from rodders, Barry Grant Inc's Triple D Induction has just released two new Demon 98 Triple Deuce intake packages for the small block Chevy. Three Demon 98 3-bolt 2-barrel carburetors are combined with the latest intake manifold technology for a bold yet classic old skool look with excellent performance and drivability.

Part # 9808 shown, shipped complete with fuel lines and fuel block

Though classic in appearance, the Demon 98 is a modern high-performance interpretation of the vintage two-barrel carburetors that were used throughout the fifties and early sixties. All three of the Demon 98 carburetors have both idle-speed and idle-mixture adjustments for precise tuning. Each carburetor flows approximately 205 cfm and accepts 2-5/8" period-style air cleaners or air horns. Float bowls are fitted with a glass sight window and operate with fuel pressure of 6 to 7 PSI – pressure that would overwhelm the needle valves in the old 97s. The 98s use many commonly available service parts, including standard fuel bowl and metering-block gaskets, jets, power valves, needle-and-seat assemblies, air bleeds, and accelerator-pump diaphragms and nozzles, (squirters), that can be easily swapped to suit more aggressive camshafts and cylinder heads with larger ports.

Two Packages are available:

- #9808 – Demon 98 Triple Deuce Intake Package with red fuel hoses and chrome fuel block
- #9809 – Demon 98 Triple Deuce Intake Package with billet adjustable fuel rail
